SUBJECT:

Visit to Allied Amphenol Products  
Cook County/0310300002  
Broadview/Amphenol Products

On June 4, Chuck Gruntman, Mary Dinkel and I went to Allied Amphenol Products, 2801 S. 25th St. Broadview to observe the drilling of monitoring wells conducted by IT Corporation. At the time of arriving the drilling work was done. According to Mr. Paul Nomanic from IT Corp. five new monitoring wells were installed. The actual monitoring well locations can be found in the attached drawing. Four of those new monitoring wells (MW 13, 14, 15, 16S) are shallow wells (20 ft.). The other one (16D) is a deep well (45 ft.). The pvc casing of those monitoring wells are below the ground surface (about 4") and none of those monitoring wells can be locked.

On June 5, Mary Dinkel and I went back to the facility. At the time of arriving, Mr. Nemanic was measuring the underground water level. The water levels for MW 16D and 16S were 13.8 ft. and 10.36 ft. respectively. According to Mr. Nemanic, three water samples will be taken from each of the monitoring wells on June 6. Three surface water and sediment samples will be taken on June 5 afternoon.

Overall, two things were concerned:

1. None of the monitoring wells can be secured. All of the five monitoring wells are easily approachable.
2. Decontamination of water level indicator was not implemented. When the indicator was used between two wells.
